## How to Turn on API Access

Yo! Payments gateway portal provides you with an interface to control access to your account through the API. You can allow access to features through API such as Withdraw funds, Airtime Transaction, Balance check, Statements etc. The following steps will guide you through steps you can take turn on or off API access using the web interface:

1. Login to your account.
2. Access the **Security** tab.

3. From the left hand side menu, select API Access Control under Access Control category.
4. Then you will be able to see a list of items/ features you can enable and disable access through the API. Make sure that you understand the implications of enable and disabling them.
5. Some features are already enabled and others are disabled by default. For example, the Deposit feature is always enabled by default and the withdraw feature is always disabled by default. Enabling requires just checking the Checkbox assigned to the feature label. There after you have to hit the Save API Access Control Settings button to submit the new changes.
